Center TileSeal™ on top of roof nailing board. Staple or nail the Tile-Seal™ every 12 inches down hip or ridge nailing board.

Form the TileSealTM to the tile roof surface. Install the TileSealTM from the top of the hip to the eave.

Form the TileSealTM to the tile roof surface. Install the TileSealTM from the top of the hip to the eave.

Remove protective strip from adhesive tape.

Remove protective strip from adhesive tape.

Press TileSeal™ in pans of each tile. TileSeal™ can elongate 30% from barrel to pan. Take care that the edge area of the TileSeal™ is thoroughly pressed to tile. The corrugation of the TileSeal™ should become flat as the material is pressed into the tile. Then use a required rubber roller for adhesion.
